

I M A G I N E

Getting print ready files
within seconds

Easily making last-minute
changes

An automated way to track your
entire production process

Significant ink cost savings with
improved quality

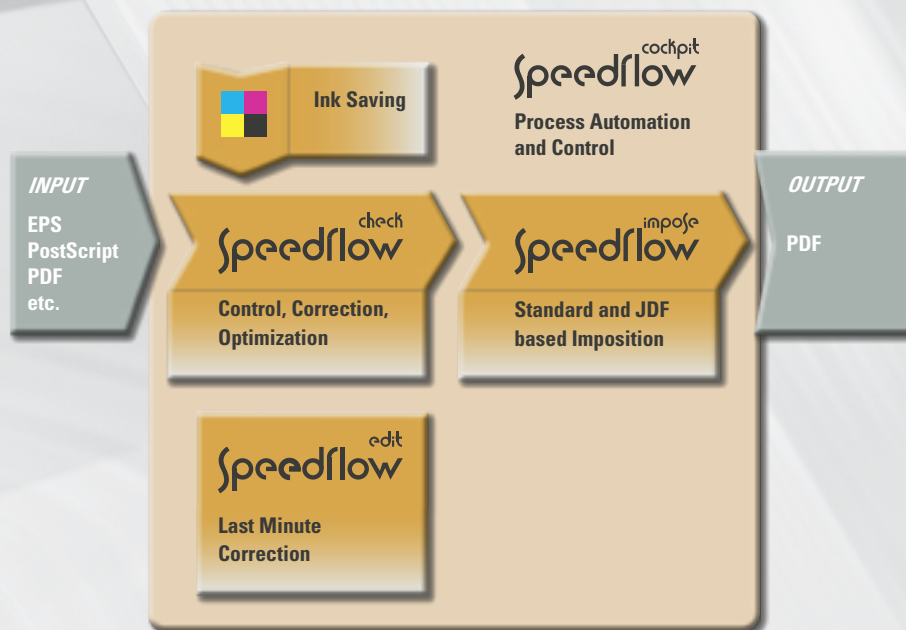

FOR THE COMMERCIAL AND DIGITAL
PRINTING INDUSTRY

OPTIMIZATION AND EDITING SOFTWARE
FOR PRINT PRODUCTION FILES

INTRODUCING ONEVISION SPEEDFLOW SOLUTIONS

Experience the software package that is unparalleled
in the printing industry

YOU ARE ABOUT TO ENCOUNTER

optimization and editing software that will, literally, change the way you think about printing. OneVision's products feature superior printing capacity — digital printing, offset sheet fed printing, and in-plant printing all benefit from OneVision's solutions. Once you grasp the magnitude that these OneVision products can have on your revenue, your bottom lines, and your workflow, you'll join the ranks of companies who benefit daily from time savings and revenue increase.

AUTOMATION, SPEED AND QUALITY

CHANGE THE WAY YOU THINK ABOUT PRINTING.

The logo for Speedflow, featuring the word "Speedflow" in a white, lowercase, sans-serif font with a stylized 'S' and 'P', set against a solid orange rectangular background.

OneVision's Speedflow Suite is the prepress optimization and editing software of choice for printers and publishers. Commercial, digital and in-house printers turn to the Speedflow Suite every day to streamline and simplify production. By automatically examining and outputting standardized PDFs, Speedflow software is designed to ensure your files will run as expected, every time.

The OneVision Speedflow Suite includes Speedflow Check, Speedflow Edit and Speedflow Impose. Automate, manage and control the entire process with our Speedflow Cockpit solution.

Know your files are automatically examined and corrected with Speedflow Check. Edit and correct virtually every component of PDFs using Speedflow Edit. Order pages into flawless PDF layouts for binding with the intuitive imposition capabilities of Speedflow Impose. Automate every step of the process with Speedflow Cockpit, OneVision's prepress management tool.

And because the entire Speedflow Suite of solutions is compatible with earlier software versions and works with your existing technology infrastructure, you can extend the life of your current technology investment. To ensure the highest quality print jobs and to keep costs low, production managers rely on OneVision's Speedflow solutions.

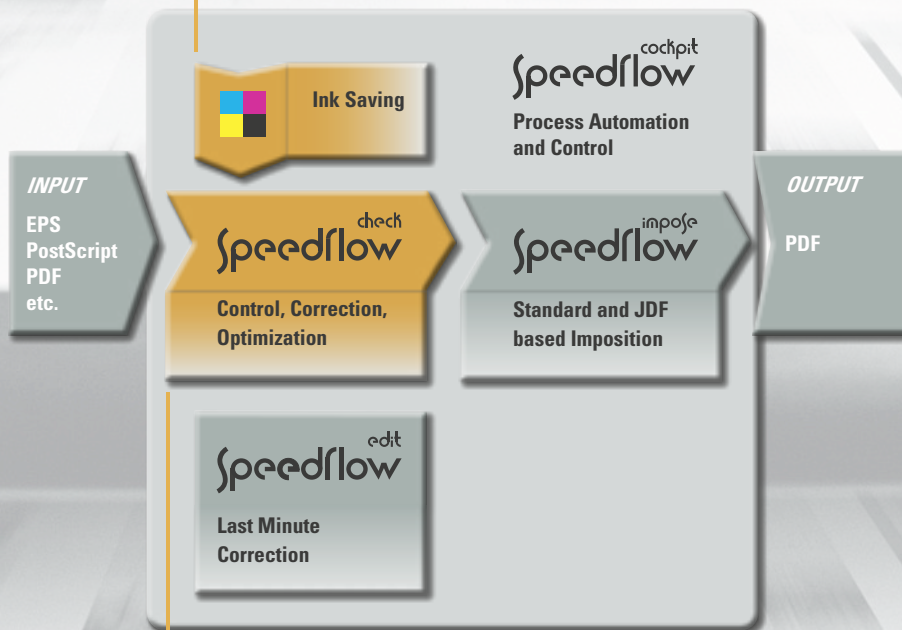

ONEVISION SPEEDFLOW CHECK AND INK SAVINGS

Identify and fix faulty elements
with increased speed and automation

Reduce Ink Costs

Consistent color printing –
even with high volume

Easy to Use

Automate control and correction
of production files

Increase throughput and
productivity

Highly customizable

SPEEDFLOW CHECK

AUTOMATICALLY DETECT AND CORRECT FAULTY FILES — NO MATTER THE SOURCE

Speedflow Check examines incoming PDF, PostScript, EPS, TIFF, JPEG, JPEG2000 and GIF files, detecting faulty files before they enter your production workflow. Speedflow Check corrects common errors and allows redirection of faulty files to Speedflow Edit for further editing. Once processed, files are written as production-ready PDFs.

To keep you informed about the status of files, Speedflow Check generates a log of errors and warnings in PDF, HTML, and ASCII formats. The PDF format uniquely layers content for easy identification and repair, which decreases your effort and saves you time. What's more, with Speedflow Check users can customize their settings using more than eighty different controls.

COLOR INK SAVINGS

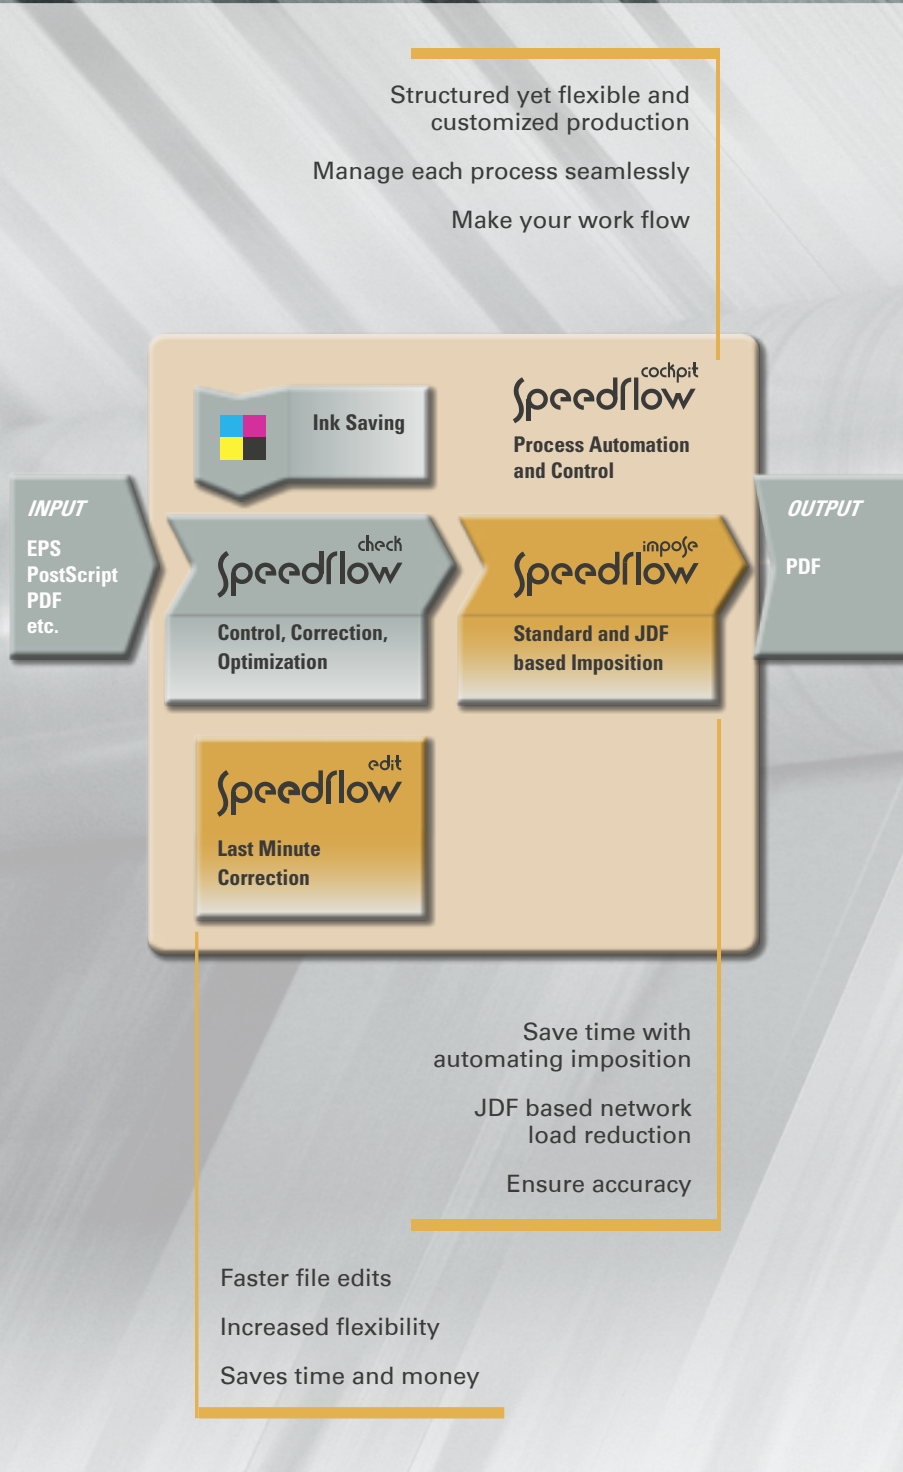

ENHANCE PRINTING QUALITY. REDUCE COSTS.

OneVision's Speedflow software line includes automated color ink savings capabilities that optimize and reduce the amount of expensive CMY ink required in the printing process to maximize the amount of more economical black ink — without affecting image quality or appearance.

In addition to significant ink cost reduction, users benefit from enhanced printing quality and increased productivity, as set-up times can be reduced and fan out and web breaks can be avoided. The solution is easy to install and can be used by those with limited color management expertise.

ONEVISION SPEEDFLOW EDIT, IMPOSE AND COCKPIT

Last minute editing, fast imposition
and greater process control

SPEEDFLOW EDIT

Speedflow^{edit}

QUICKLY AND ACCURATELY EDIT AND REPAIR FILES

Speedflow Edit enables full editing of PDF files. Speedflow Edit can disassemble an entire file down to its most basic components — imagine altering text, text containers, Bezier curves, and color content without having to obtain and access the original document or use the original program.

With the ability to Zoom up to 80,000% and full WYSIWYG, Speedflow Edit ensures precision to help meet your deadline and keep your production process on track.

SPEEDFLOW IMPOSE

Speedflow^{impose}

THE POWER OF AUTOMATED PRE-BINDING PAGE ARRANGEMENT

Speedflow Impose is OneVision's JDF-compliant imposition software for PDF files. A powerful, fast imposition tool, Speedflow Impose flawlessly arranges separated, composite and monochrome PDF pages for binding.

Speedflow Impose seamlessly adapts to workflows in print and media by interpreting PDFs and offering a multitude of imposition schemes and printing combinations. Import templates as JDF or PJTF job tickets from common imposition applications.

Using the software, fully imposed PDF flats, in which pages have been arranged for sequential binding, can be imaged on any device supporting PDF input.

SPEEDFLOW COCKPIT

Speedflow^{cockpit}

AUTOMATED, FLEXIBLE PRE-PRESS PROCESSES

Speedflow Cockpit helps to manage and automate every pre-press process including the communication process by guiding each job from design to delivery. Speedflow Cockpit automatically controls all installed software within the Speedflow Suite, including Check, Impose, Edit and any additional applications used within the production process.

And because Speedflow Cockpit communicates via XML job tickets and JDFnet, external applications can be easily integrated into the workflow.

"The OneVision Speedflow Suite offers real value for money."

"It ensures the accuracy of the files and the common errors we were experiencing in the past — such as missing fonts, RGB instead of CMYK images, wrong image data and incorrect spot colour readings — are now automatically corrected by the Speedflow software."

"Press downtimes have been drastically reduced and we now lose only a fraction of the plates in comparison to our pre Speedflow days."

Rob Hunter, Prepress Manager,
Ken Girvan, United Kingdom

"I can't tell you how happy I am with your software Speedflow Edit. The fact that I can run your software from home is a real time saver. It saves me from running back to the shop after hours and in weekends."

"... there isn't anything I can't fix with Speedflow Edit."

Ken Pecca, Pre-Media Manager
Hearst Magazines, USA

"Speedflow not only saves me time, it is also a very economic solution for PDF-based companies."

"The standard of OneVision is far higher than the one of certified PDF — though I know that OneVision offers Sealed Profiles for producing Sealed PDF documents to meet standardized production requirements."

Willem Jubels, CEO
Printerette, The Netherlands

"The printing quality is excellent and the significant ink cost reduction allows a short pay back period. The easy handling and configuration without additional color management expertise required has of course influenced our investment decision."

Gerhard Friedmann, Division Manager Offset Print
Georg Kohl, Germany

SIMPLIFY PRINT AND MEDIA

OneVision is an international software company with installations worldwide to secure and optimize complex print and media workflows.
